

Cards are a convenient means of displaying content composed of different types of objects. They're also well-suited for presenting similar objects whose size or supported actions can vary considerably, like photos with captions of variable length.

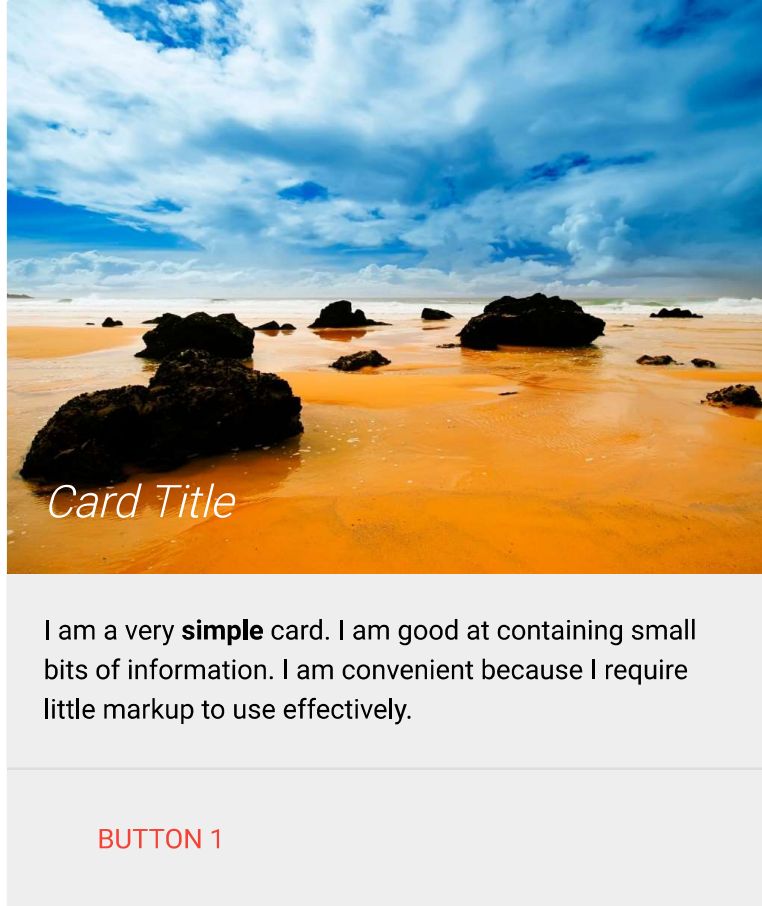

Basic Card

```
Dim          As ABMCard
    .InitializeAsCard(      , "card1", "Card Title", "I am a very simple card. I am good at
containing small bits of information. I am convenient because I require little markup to use
effectively.",      , "basiccard")
    .AddAction("BUTTON 1")
    .AddAction("BUTTON 2")
    .Cell(2,1).AddComponent(      )
```

Image Card

Here is the standard card with an image thumbnail.

```
Dim          As ABMCard
.InitializeAsCard(          , "card2", "Card Title", "I am a very simple card. I am good at
containing small bits of information. I am convenient because I require little markup to use
effectively.",          , "whitetitle")
.Image = "../images/sample-1.jpg"
.AddAction("BUTTON 1")
.Cell(5,1).AddComponent(          )
```

Card Reveal

Here you can add a card that reveals more information once clicked. Just add the line `.IsReveal = true`.

Card Title

BUTTON 1

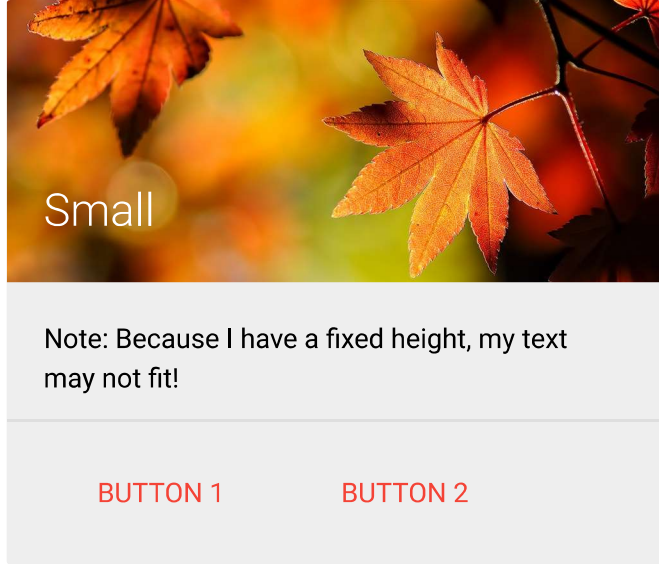

```
Dim          As ABMCard
    .InitializeAsCard(    , "card3", "Card Title", "I am a very simple card. I am good at
containing small bits of information. I am convenient because I require little markup to use
effectively.",    ,    , "")
    .Image = "../images/sample-1.jpg"
    .IsReveal = True
    .AddAction("BUTTON 1")
    .Cell(8,1).AddComponent(    )
```

Card Sizes

If you want to have uniformly sized cards, you can use our premade size types. Just add the size type in the Initialize method. The width is not affected by this parameter but is determined by your cell size.

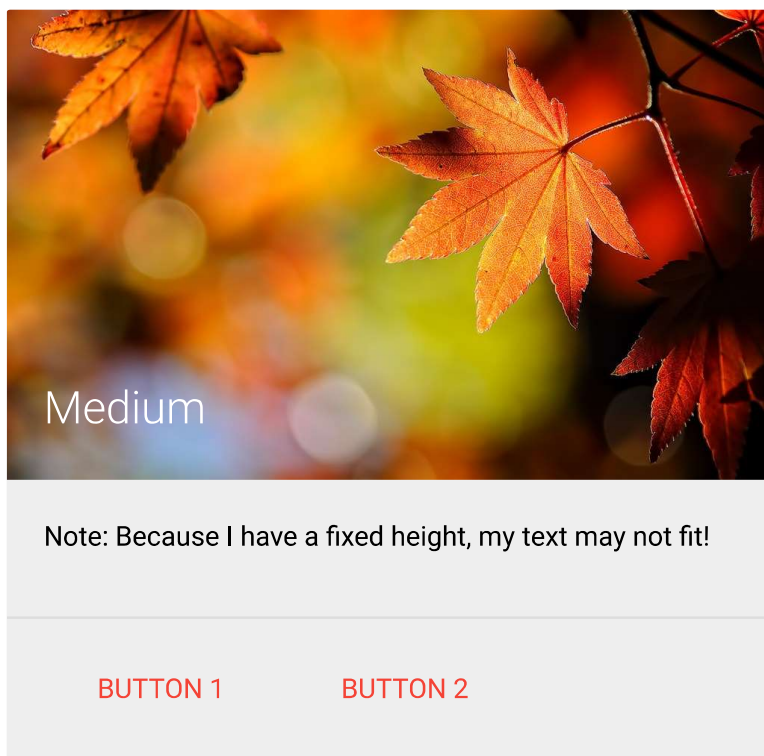

CARD_SMALL

The Small Card limits the height of the card to 300px.

CARD_MEDIUM

The Medium Card limits the height of the card to 400px.

CARD_LARGE

The Large Card limits the height of the card to 500px.

Large

Note: Because I have a fixed height, my text may not fit!

BUTTON 1

BUTTON 2

Card Panel

For a simpler card with less markup, try using a card panel which just has padding and a shadow effect

I am a very simple card. I am good at containing small bits of information. I am convenient because I require little markup to use effectively. I am similar to what is called a panel in other frameworks.

```
Dim          As ABMCard
    .InitializeAsPanel(          , "card7", "I am a very simple card. I am good at containing small
bits of information. I am convenient because I require little markup to use effectively. I am
similar to what is called a panel in other frameworks." ,"redpanel"))
    .Cell(17,1).AddComponent(          )
```
